

Benefits

Reducing Complexity

With INTO's consolidated expertise a unique overarching view can be provided to overcome formulation challenges and reduce complexity.

Customization

A customized solution can be composed specific to your development need

One Touchpoint

INTO is the single gateway giving direct access to expertise and experience in the field of inhalation solving your formulation challenge.

Powder Filling Technologies

STERLING
API CDMO
Particle Engineering

Excipient Solution Provider

INTO is a unique cooperation in the field of inhalation development services offered by DFE Pharma, Sterling S.P.A. and Harro Höfliger. With the overarching view, combined expertise and coordinated approach, INTO supports customers to make their respiratory product development fast, economic and easy to manage.

Services

API development and characterization

Solid state characterization, particle engineering using sono-crystallization, micronization using jet-milling technology and post-micronization conditioning studies.

Stand alone/individual studies

These studies include analytical method development and validation, RLD Characterization, Pre-formulation studies, formulation development and optimization, powder filling trials and stability studies.

Preliminary development

Using a stepwise approach and QBD principles. From proof of concept studies up to formulation optimization.

Consultancy services

Based upon your requirements a tailored solution will be offered utilizing the combined expertise of INTO's expert consultants
